

The local Variable is first assigned 0 (1-1) at step 1, then decreased by 1 in step 4. The val parameter is decreased in step 3

2

Program: Test Globals, Locals, and Params

Global Variable:
* evil (Integer)

Procedure: Test Params

Parameters:

1: val (Integer)

Variables:

* local (Integer)

Steps:

1: Assign local, val - evil

2: Output val, local, and evil

3: Decrease val by 1

4: Decrease local by 1

5: Decrease evil by 1

Variables:

* good (Integer)

Steps:

1: Assign to evil, 1

2: Assign to good, 1

3: Call Test Params (good)

4: Output good and evil to the Terminal

The evil Global Variable is decreased by 1 in step 5

3

evil: 0

The Computer executes each step of the Procedure interacting with the different Variables
