

Program: Test Globals, Locals, and Params

Global Variable:

* evil (Integer)

Procedure: Test Params

Parameters:

1: val (Integer)

Variables:

* local (Integer)

Steps:

1: Assign local, val - evil

2: Output val, local, and evil

3: Decrease val by 1

4: Decrease local by 1

5: Decrease evil by 1

Variables:

* good (Integer)

Steps:

1: Assign to evil, 1

2: Assign to good, 1

3: Call Test Params (good)

4: Output good and evil to the Terminal

When Test Params
finishes control
returns to Main.

1

Main

good: 1

Current Instruction:

The value in Evil has changed
as a result of calling Test
Params

2

evil: 0

The Computer calls the
Write Procedure with
the values from
good and evil
