

Delete a Row

Read the id of the row to delete from the user, store it in Row Id

Get the index of the row with Row Id and store it in Row Index

Important - Note that this starts at Row Index, and loops to the second last element in the array.

for each element of ObData's Rows

i is Row Index..n-2

Copy the next Row over the current Row in ObData's Rows

Adjust the size of ObData's Rows to have one fewer element

End
